## **1.0 INTRODUCTION**

The Douglas Aircraft Company (DAC) C-6 Facility is located at 19503 South Normandie Avenue, Torrance, California (Figure 1). Quarterly groundwater sampling is being conducted in response to the California Regional Water Quality Control Board - Los Angeles Region correspondence to DAC, dated 7 April 1992. This report summarizes laboratory analytical data generated through the chemical analysis of groundwater samples collected during the period of 6 and 7 September 1995, Third Quarter 1995.

## **2.0 QUARTERLY MONITORING PROGRAM**

Third Quarter 1995 groundwater sampling was performed in accordance with standard sampling procedures. Static water level depths were measured on 6 September 1995 prior to initiating purging of groundwater from any observation wells and again on 20 September 1995 to confirm the measured depths. Static water depths on monitoring wells (MW-9, MW-18 and MW-19) located in the southern portion of the DAC property installed for the Montrose Chemical Corporation Remedial Investigation were not measured for this quarter.

Groundwater samples were collected from the following fifteen wells (Figure 2) and chemically analyzed for volatile organic compounds (VOCs) by EPA Method 8240/8260 for the Third Quarter 1995.

WCC-1S, WCC-2S, WCC-3S, WCC-4S, WCC-5S, WCC-6S, WCC-7S, WCC-8S, WCC-9S, WCC-10S, WCC-11S, WCC-12S, WCC-1D, WCC-3D, and DAC-P1.

Table 1 summarizes observation well construction details. Tables 2 and 3 summarize the results of chemical analysis of groundwater samples and duplicates for major and minor constituents at the C-6 facility, respectively. Chemicals detected in samples from each observation well are shown in Figure 3. Table 4 summarizes available measured groundwater elevations to date. Estimated groundwater elevation contours for the Third Quarter are presented in Figure 4. Historical chemical concentration profiles for the indicator chemicals trichloroethene and 1,1-dichloroethene are shown in Figure 5. Copies of laboratory data sheets, laboratory/field Quality Control data sheets, groundwater purge and sample forms, and Chain-of-Custody records are included in Appendices A, B, C, and D respectively.

### **2.1 Groundwater Sampling Procedures**

Prior to collecting groundwater samples from each well, groundwater was purged using an electrical submersible pump that was temporarily installed in the observation well. After lowering the pump to the approximate mid-point of the saturated well screen, approximately three to five wetted casing volumes of groundwater were purged from the well until the following groundwater monitoring parameters had stabilized to within 10% of preceding values: pH, electrical conductivity, and temperature. Purged groundwater was stored onsite in DOT approved 55 gallon barrels pending the results of laboratory analysis of samples.

Following groundwater purging, the submersible pump was removed from the well and a representative groundwater sample was collected using a steam-cleaned stainless steel point-source bailer equipped with top and bottom ball-check valves. The bailer was lowered to the approximate mid-point of the saturated well screen interval and retrieved to ground surface. The contents of the bailer were drained into three labeled 40-ml capacity vials, preserved with HCl.

## 2.2 Field QA/QC Procedures

Duplicate groundwater samples were collected for the sampling rounds on 6 and 7 September 1995 for quality control purposes. The duplicates were collected in three HCl-preserved vials each and identified by inserting the collection date after "DW-" (DW-090695 and DW-090795). No further sample identification was provided to the laboratory. Samples DW-090695 and DW-090795 were taken from observation wells WCC-11S and WCC-6S, respectively.

Following decontamination of the bailer by steam-cleaning, and prior to collection of groundwater samples from the successive well, an equipment rinsate blank was prepared for laboratory analysis. The equipment rinsate blank was prepared by pouring Reagent Grade II water, prepared by the analytical laboratory, through the bailer and discharge spigot and collecting the rinsate in two 40-ml vial preserved with HCl. The blank was identified following a similar protocol to that used for duplicate water samples and is identified as "EB090795". The wells sampled before and after rinsate blank preparation were recorded. EB090795 was collected after sampling well DAC P-1, the last well sampled that day. A trip blank was also analyzed for the second day of sampling and shipping and is identified as TB-090795.

All groundwater, duplicate, and field blank samples were transported in ice-cooled chests to Curtis & Tompkins, Ltd., General Analytical Laboratory, Irvine, California using U.S. EPA-recommended Chain-of-Custody procedures.

## 3.0 EVALUATION OF ANALYTICAL RESULTS

### 3.1 Groundwater Gradient

Groundwater levels were measured prior to sampling on 6 September 1995, and again on 20 September 1995 to confirm the measurements (Table 4 and Appendix C). The shallow zone groundwater elevations measured on 20 September 1995 range from 15.59 feet below mean sea level (MSL) to 16.82 feet below MSL. An estimated potentiometric surface map for the shallow zone as measured on this day is presented as Figure 4. The groundwater gradient in the shallow zone was generally south-southeast with a southerly directed trough-like depression between observation wells WCC-10S and WCC-12S.

Insufficient data (two wells) are available to define the groundwater gradient in the deeper zone. Groundwater elevation in the two wells (WCC-1D and WCC-3D) is approximately 16.60 and 16.47 feet below MSL, respectively.

### **3.2 Analytical Data**

The results of chemical analysis of groundwater and duplicate samples are summarized in Tables 2 and 3. Table 2 lists major constituents and Table 3 lists additional minor constituents of samples tested. The duplicate groundwater samples are indicated by an asterisk and are presented with the "original" groundwater samples. These tables include cumulative analytical data for all monitoring wells and detection limits (where available) for the listed chemicals.

The following observations are noted:

- Data for groundwater samples collected from well DAC-P1, located at the upgradient property boundary, indicate a TCE concentration of 13,000 micrograms per liter ( $\mu\text{g}/\text{L}$ ) coming onto DAC's property. This test result shows a decrease relative to prior sampling events, but is within the historical range. Other chemicals detected in well DAC-P1 include 1,1-DCE, cis-1,2-DCE, chloroform and toluene. These chemicals were detected at concentrations less than 100  $\mu\text{g}/\text{L}$ . DAC-P1 is screened in the shallow zone.
- Background concentrations of TCE and 1,1-DCE in the shallow zone upgradient or cross gradient wells WCC-10S, WCC-2S, and WCC-11S increased slightly, but remain in the range of 100 to 200  $\mu\text{g}/\text{L}$  of TCE and tens of  $\mu\text{g}/\text{L}$  of 1,1-DCE.
- Groundwater elevation data (Figure 4) and chemical concentration data (Figure 3) indicate that chemical transport in the shallow zone is in a generally southerly to southeasterly direction in the vicinity of buildings 36 and 41. Most chemical concentration data from the eastern boundary observation wells (WCC-5S, and WCC-9S) are within the same range or lower than upgradient or cross gradient "background level" wells (WCC-10S, WCC-2S and WCC-11S).
- WCC-3S data showed a significant decrease in 1,1-DCE and toluene over recent historical data.
- WCC-6S data showed significant decrease in 1,1-DCE, 1,1,1-TCA, MIBK, cis-1,2-DCE, and toluene over the previous sampling event.
- Decreases in 1,1-DCE and TCE were also observed in wells WCC-1S and WCC-8S.
- WCC-3D data showed significant increases in 1,1-DCA, 1,1,1-TCA, TCE and toluene compared to concentrations observed last quarter. However, last quarter's data was relatively low, and this quarter's data is more consistent with other historical data.
- Chemical concentration variances within all observation wells (other than WCC-3D discussed above) were typical of historical ranges.
- Analytical data from the equipment rinsate blanks, sample duplicates, trip blanks, and laboratory spikes and duplicates are indicative of reliable data.

Notes: ug/l = micrograms per liter

1,1-DCE = Dichloroethene

1,1-DCA = Dichloroethane

1,1,1-TCA = 1,1,1-Trichloroethane

TCE = Trichloroethene

MIBK = Methyl Isobutyl ketone

cis-1,2-DCE = cis-1,2-Dichloroethene

trans-1,2-DCE = trans-1,2-Dichloroethene

MEK = Methyl ethyl ketone

## Notes:

1. Reference point is north side, top of well casing
  2. Reference point elevation measured by Hargis + Associates, Inc.
  3. Data taken from Woodward-Clyde Consultants Phase II Report, May 1988.
  4. Data taken from Woodward-Clyde Consultants Phase III Report, March 1990.
  5. NA - Not Available - No access to offsite wells.
  6. Installed by Hargis + Associates, Inc. for Montrose Chemical Corporation
  7. Well WCC-6S could not be opened on 20 September 1995. The water level elevation shown was measured on 6 September 1995.
- \* Water Level Elevation not measured due to wellhead obstructions.

### NOTES:

1. Samples Analyzed by EPA Method 8240/8260
2. All Results Reported in ug/l (ppb)
3. Wells MW-8,-9,-10,-18 and -19 Installed by Montrose Chemical Corporation and are not sampled by Douglas Aircraft Co.
4. Duplicate samples were analyzed for wells WCC-6S and WCC-11S.
5. <5=compound not detected at a quantitation limit of 5 ug/l. Nondetects posted only for VOCs detected in the well in the previous sample round. Figure shows only major constituents listed in Table 2.

Location: **DAC**

Report On: **ELEVEN LIQUID SAMPLES ANALYZED AS SPECIFIED ON ATTACHED CHAIN OF CUSTODY**

This report certifies that the samples were received in good condition (i.e. intact, chilled, and/or preserved appropriately) and that strict chain of custody procedures were adhered to at all times. It further certifies that the methods of analysis used are in fact those listed within this report and that Curtis & Tompkins, Ltd. has current certification for all work performed in the laboratory. Exceptions to this statement are specifically noted in the analytical report or on the attached chain of custody.
